October 25, 2026

Dear DLVR / Doge Labs Hiring Team,

I am writing to express my energetic enthusiasm for the **Gameplay Engineer (VR/Unity)** role at DLVR. Having closely followed your pioneering work on *Big Ballers VR* and *Animal Rivals*, I share your dedication to engineering cutting-edge, physics-driven, multiplayer VR experiences that push the boundaries of what is possible on Meta Quest hardware.

As a VR Game Developer who has delivered **50+ Unity/VR applications**—including **35+ standalone Meta Quest titles maintaining rock-solid 90+ FPS**—I know first-hand the balance between ambitious game feel and aggressive mobile performance constraints.

Here is how my hands-on experience directly maps to your vision at DLVR:

- **Meta Quest Physics & Gesture Interactions:** In *Crunch Dunk VR* (a branded collaboration with Doritos), I engineered responsive physics-based gesture recognition, ball trajectory prediction, and real-time Firebase leaderboards. In *David vs Goliath VR*, I built procedural IK archery mechanics, boss AI, and tactile collision response.
- **Multiplayer Architecture & Networking:** Hands-on experience implementing real-time multiplayer synchronization using **Photon Fusion, Mirror, WebSockets**, and custom low-latency TCP/UDP protocols, including lobby creation, player state replication, and matchmaking.
- **Standalone 90+ FPS Optimization:** Proven track record profiling and optimizing mobile VR chipsets using the Unity Profiler and OVR Metrics Tool—optimizing draw calls, custom shader graph materials, GPU batching, and garbage-collection-free object pooling.
- **Iterative, Autonomous Prototyping:** Deeply accustomed to autonomous feature design, rapidly validating mechanics through weekly community playtests, and iterating based directly on player feedback.

I own and develop on Meta Quest hardware daily and would welcome the opportunity to connect with the team, dive into a playtest, and contribute directly to your next chart-topping VR titles.

Thank you for your time and consideration.

Sincerely,
Anniket
Senior Unity & VR Developer
