Date: October 25, 2026
To: Hiring Team | Escape Velocity Entertainment Inc
Position: Senior Level Designer (Fully Remote)

Dear Escape Velocity Hiring Team,

I am writing to express my enthusiastic interest in the **Senior Level Designer** role at **Escape Velocity Entertainment Inc**. Having delivered over 50 interactive titles across Unity and Unreal Engine—including 35+ high-intensity VR/3D titles demanding rock-solid 90 FPS performance and intuitive spatial awareness—I resonate deeply with Escape Velocity's mission of building ground-breaking worlds and prioritizing genuine player agency through thoughtful spatial architecture.

Throughout my 7+ years of hands-on game development and level design, I have treated levels not merely as visual dioramas, but as dynamic conversational spaces between the player, mechanics, and AI systems. Here is how my experience aligns directly with your production goals:

- **Spatial Architecture & Geometry Blockouts:** Proven track record prototyping and constructing combat arenas, objective routes, and traversal layouts from rough greybox geometry to production-ready scenes. I design with intent—carefully tuning sightlines, verticality, cover density, pacing choke points, and navigation waypoints to naturally guide player instincts without artificial friction.
- **Seamless Mechanics & AI Integration:** Extensive background collaborating with gameplay and AI programmers to design spaces that empower enemy behaviors—crafting intelligent NavMesh topologies, dynamic cover nodes, tactical flanking loops, and trigger volumes that enhance emergent combat scenarios.
- **Rapid Prototyping & Playtest-Driven Iteration:** Fast-paced iteration workflow in Unity and Unreal Engine. I actively interpret telemetry and qualitative playtest feedback to eliminate navigational ambiguity, balance encounter difficulty, and tighten the core game feel.
- **Cross-Disciplinary Bridge:** Having worked as both a lead developer and technical designer, I seamlessly bridge the gap between concept art, environment art, and engineering—ensuring blockouts translate into visually breathtaking environments without compromising gameplay metrics or collision performance.

Escape Velocity's player-first ethos, commitment to creative ownership, and worldwide remote culture represent the exact environment where I thrive. I am fully prepared to collaborate across global time zones, take ownership of level design pipelines, and help craft unforgettable action experiences for console and PC players.

I would welcome the opportunity to discuss how my level design philosophies, spatial prototyping expertise, and multi-engine proficiency can support Escape Velocity's upcoming titles. Thank you for your time and consideration.

Sincerely,

Anniket Prajapati
Senior Game Developer & Level Designer
