To: Talent Acquisition & Creative Technology Team | Fivestone Studios & Sourcing Unicorns
Position: Lead Unity Developer (Interactive & Immersive Experiences)

Dear Fivestone Studios & Sourcing Unicorns Hiring Team,

I am writing to express my eager interest in the **Lead Unity Developer** position for **Fivestone Studios**. Having led architecture and development on over 50 interactive titles across Unity—including 35+ high-performance immersive XR/VR experiences and hardware-integrated installations—I am energized by Fivestone's dedication to crafting bold, story-driven experiential media that bridges physical spaces and real-time digital worlds.

I fully operate during US business hours and have spent over 7 years managing end-to-end technical pipelines, translating ambitious creative briefs into rock-solid, production-ready interactive deployments:

- **Technical Architecture & TDD Leadership:** Architected scalable, modular Unity frameworks utilizing clean C# OOP, component hierarchies, scriptable architectures, and decoupled service layers. Experienced in authoring comprehensive Technical Design Documents (TDD) that define system dependencies, memory budgets, and cross-discipline integration protocols.
- **Hardware, AV & Sensor Integration:** Extensive background integrating external hardware, sensors, interactive touchscreens, and peripheral systems into Unity applications. Proficient in real-time communication protocols including TCP/IP, UDP, WebSockets, REST APIs, and external device controller feeds to ensure continuous, unattended installation stability.
- **Graphics Profiling & Real-Time Performance:** Deep proficiency across Unity's Universal Render Pipeline (URP) and HDRP. Adept at rigorous CPU/GPU profiling, draw call batching, compute shader utilization, and memory optimization—consistently delivering locked 90+ FPS on standalone and tethered platforms without visual compromise.
- **Web Overlays & Hybrid Front-End Integration:** Hands-on experience integrating modern front-end technologies (React, TypeScript, WebGL/WebSockets) with native Unity builds for synchronized control panels, companion apps, and dynamic data overlays.

Fivestone's Five Stones culture—honor, bravery, vision, generosity, and excellence—resonates deeply with my approach to engineering leadership. I take pride in leaving ego at the door, mentoring fellow developers, collaborating smoothly with technical artists and producers, and taking absolute ownership of build reliability and deployment.

I welcome the opportunity to discuss how my technical leadership, immersive system experience, and production discipline can help elevate Fivestone Studios' upcoming experiential installations. Thank you for your consideration.

Warm regards,

Anniket Prajapati
Lead Unity Developer & Systems Architect
