Dear Hitapps Hiring Team,

I am writing to express my strong enthusiasm for the **Game Designer** role at Hitapps. Having designed and shipped **50+ interactive game titles** spanning puzzle, arcade, casual physics, and spatial simulations, I have immense admiration for Hitapps' exceptional mastery of the mobile puzzle space with global chart-toppers like *Solitaire Associations*, *Figgerits*, and *Cross Logic* (200M+ downloads).

As a designer who combines deep player psychology, analytical data orientation, and technical prototyping agility, here is how my experience aligns with Hitapps' product goals:

- **Core Mechanics & Game Feel:** Experienced in designing intuitive, highly tactile puzzle and casual interactions. Skilled at establishing crisp feedback loops—micro-animations, audio-visual juice, and haptic cues—that transform simple word or logic puzzles into compelling, sticky daily habits.
- **Level Balancing & Pacing Curves:** Hands-on experience designing and balancing multi-stage level progressions. Proficient at calibrating difficulty ramps, failure tolerance, and "eureka!" moments to maximize early player retention (FTUE) while minimizing churn at key choke points.
- **Data-Driven LiveOps & Hypothesis Testing:** Analytical mindset attuned to mobile KPIs (D1/D7/D30 retention, session length, level drop-offs). Experienced in formulating concrete A/B test hypotheses, analyzing telemetry funnels, and iterating on event economies to boost engagement.
- **UX & Clear Documentation:** Former graphic design team lead with strong wireframing, UX hierarchy, and GDD documentation capabilities. I produce crystal-clear specification documents, interactive flowcharts, and edge-case definitions that engineers and artists can execute seamlessly.
- **Designer-Programmer Velocity:** Because I understand game code and engine architecture, I design features with technical feasibility in mind, drastically reducing iteration friction between design and production.

I would be thrilled to bring my passion for systemic puzzle design, player psychology, and creative execution to the world-class team at Hitapps.

Thank you for your time, vision, and consideration.

Warm regards,
Anniket
Game Designer & Technical Systems Developer
