Hiring Team — Engineering
Mob Entertainment (Creators of *Poppy Playtime*)

Application for Senior Systems Engineer (Unreal Engine & Multiplayer Gameplay Architecture)

Dear Mob Entertainment Hiring Team,

I am writing to express my enthusiastic interest in the **Senior Systems Engineer** position at Mob Entertainment. Having tracked Mob Entertainment's groundbreaking narrative and suspense design in the *Poppy Playtime* franchise—and its colossal cultural impact with over 200 billion views—I am thrilled by the opportunity to architect robust, scalable gameplay systems and multiplayer frameworks for your upcoming Unreal Engine projects.

Across a career delivering **50+ commercial game projects** and **35+ high-performance VR titles locked at 90+ FPS**, I specialize in core systems architecture, real-time networked gameplay, and extensible framework design:

- **Architecting Extensible Core Frameworks:** Designed modular, data-driven gameplay foundations that separate data, simulation, and presentation—allowing game designers and gameplay programmers to rapidly iterate on mechanics without compromising engine performance or introducing technical debt.
- **Real-Time Multiplayer & Network Synchronization:** Architected resilient client-server replication models, RPC structures, custom state synchronization, and latency compensation across WebSockets, TCP/UDP sockets, and real-time netcode—ensuring stable, desync-free experiences under heavy network latency and packet jitter.
- **Rigorous Performance Profiling & Optimization:** Deep background isolating CPU/GPU bottlenecks, memory allocations, draw calls, and physics overhead to maintain high framerates on constrained hardware—experience that directly translates into building rock-solid, production-grade Unreal Engine systems and plugins.
- **Technical Leadership & Cross-Functional Collaboration:** Habitual practice partnering closely with creative leads and technical directors, conducting structured peer code reviews, documenting clean workflows in Confluence, and actively leveling up junior and mid-level programmers.

I would welcome the opportunity to bring my systems engineering discipline, deep networked gameplay expertise, and passion for atmospheric, tension-driven game design to Mob Entertainment's engineering team. I am available for live video interviews at your earliest convenience.

Sincerely,

Anniket Prajapati
B.Tech in Computer Science
