Hiring Team — Netflix Games Studio
Netflix, Inc.

Application for Senior Game Engineer, Gen AI - Games (Requisition ID: JR42956)

Dear Netflix Games Studio Engineering Leadership,

I am writing to express my enthusiastic interest in the **Senior Game Engineer, Gen AI - Games** position at Netflix Games Studio. Netflix is pioneering a new frontier in interactive entertainment where player agency and emergent narrative converge. Having engineered and shipped over **50+ commercial game titles** and **35+ high-fidelity VR experiences**, I specialize in building deterministic, low-latency gameplay architectures and integrating dynamic external AI/API intelligence into real-time game loops without compromising frame stability or player feel.

My technical background directly addresses Netflix's core requirements for this pioneering GenAI gameplay role:

- **Bridging Generative AI & Deterministic Game Logic:** Deep experience architecting mediation layers that sit between asynchronous API/model outputs (LLM inference, streaming tokens, generative assets) and deterministic game ticks. Proven track record managing latency compensation, caching strategies, and fallback logic so that procedural and AI-generated behaviors seamlessly hook into core AI behavior trees, narrative graphs, and state machines.
- **Guardrails, UX & Content Validation Layer:** Built custom schema validation and runtime filtering layers that constrain non-deterministic AI generation within strict game balance envelopes, narrative parameters, and safety guidelines—ensuring that dynamic dialogue, NPC intent, and generated items remain on-theme and mathematically balanced.
- **Core Gameplay Engineering & 3Cs Mastery:** 8+ years architecting extensible player controllers, modular ability frameworks, reactive combat systems, and physics-driven mechanics in C# and C++ across Unity and Unreal Engine. Expert at profiling CPU/GPU performance (Unreal Insights, Unity Profiler, RenderDoc) to guarantee sub-11ms frame times even during intensive runtime computations.
- **Rapid Prototyping & "Find-the-Fun" Tooling:** Extensive background developing Python pipelines, custom editor inspectors, and automation tooling that empower game designers to rapidly test

dynamic mechanics, greybox levels, and iterate on AI parameters without requiring engine rebuilds.

I thrive at the intersection of creative game design and bleeding-edge systems programming. I would be thrilled to bring my passion for player-centric AI, technical rigor, and collaborative engineering to Netflix Games Studio. You can review my shipped titles, technical breakdowns, and interactive mechanics at **https://portfolio-web-pi-inky.vercel.app/**.

Sincerely,

Anniket Prajapati
