October 25, 2026

Dear Patronus AI Team,

I am writing to express my strong interest in the **Expert: Unreal Game Development (Contract, Remote)** role at Patronus AI. With over 3 years of hands-on game engineering delivering **50+ shipped interactive titles** across gameplay programming, network synchronization, and systems design, I am excited by your mission to create rigorous, authentic evaluation benchmarks that advance AI intelligence in complex game engine environments.

I specialize in **Gameplay Programming, Technical Design, and Multiplayer Systems**. Having architected complex physics mechanics, state machines, and real-time networking protocols, I know exactly what separates real production work from superficial code snippets—and how current frontier models stumble when tasked with nuanced engine architecture, replication timing, and edge-case validation.

Here is how my technical background aligns with your benchmark authoring needs:

- **Gameplay Systems & Technical Design:** Deep experience implementing core mechanics, enhanced input mapping, character physics, inverse kinematics, and modular state machines. Comfortable structuring systems in C++ and visual scripting with clean separation of concerns, data-driven parameters, and deterministic behavior.
- **Multiplayer Networking & Replication:** Hands-on background in client-server replication, RPCs, state synchronization, lag compensation, and packet budget optimization (Mirror, Photon Fusion, low-latency TCP/UDP). I understand how network replication breaks in subtle ways that LLMs consistently misdiagnose.
- **Unreal Engine & C++ Proficiency:** Solid working knowledge of Unreal Engine 5 workflows, C++ gameplay architecture, and Blueprint scripting. Capable of building reproducible test levels, reference solutions, and objective acceptance verification rubrics.
- **Objective Quality & Rubric Verification:** As a developer who has delivered 50+ projects to international clients with a 4.9/5 satisfaction rating, I have extensive experience defining explicit acceptance criteria, writing reproducible bug reports, and crafting comprehensive documentation.
- **Autonomous Asynchronous Execution:** Accustomed to working across global time zones, delivering production-ready assets independently, and maintaining tight turnaround times.

I would welcome the opportunity to complete your paid trial task and contribute high-fidelity evaluation datasets to Patronus AI's frontier research.

Thank you for your consideration.

Sincerely,
Anniket
Senior Game Developer & Systems Engineer
