October 25, 2026

Dear thatgamecompany Hiring Team,

I am writing to express my strong interest in the **Technical Game Designer** role at thatgamecompany. As a lifelong admirer of *Journey*, *Flower*, and *Sky: Children of the Light*, I have always been inspired by your studio's ability to create deeply emotional, socially connected experiences through elegant technical systems and artistic vision. The opportunity to contribute to this legacy as a designer-programmer hybrid aligns perfectly with my career trajectory.

With **3+ years delivering 50+ Unity applications**—spanning **10 VR titles**, **7 2D games**, and **6 3D projects**—I have built a career at the intersection of gameplay engineering, systems design, and player experience crafting. My portfolio demonstrates exactly the designer-programmer hybrid profile you seek: I don't just implement systems; I design the mechanics, prototype them in code, and iterate based on player feel.

Here is how my hands-on experience maps directly to your requirements:

- **Designer-Programmer Hybrid (C# / Visual Scripting / C++):** I architect and implement core gameplay systems from prototype to ship. In *David vs Goliath VR*, I designed and programmed procedural inverse kinematics archery mechanics, boss AI state machines, and tactile collision response entirely in C#. In *Element Entropy VR*, I built an elemental spellcrafting system with modular visual scripting architecture. My 2D portfolio includes complete games with custom physics (Hill Climb replica, Flappy Bird clone, Brick Breaker) — each designed, coded, and balanced by me.
- **Camera Systems & Player Controls:** Your job description mentions camera features as a prime example — I have implemented multiple camera systems including smooth follow, collision-aware cinematics, and VR comfort-focused locomotion cameras. In *SpaceWar VR*, I built a 6DOF flight camera with adaptive FOV and motion-sickness mitigation.
- **Multiplayer & Live Operations:** I have hands-on experience with real-time multiplayer synchronization using **Photon Fusion, Mirror, WebSockets**, and custom low-latency TCP/UDP protocols — including lobby creation, player state replication, matchmaking, and live leaderboard systems (Firebase). I understand the challenges of operating live multiplayer games at scale.
- **Procedural Animation & Interactive Systems:** Built procedural animation systems for creature AI, cloth simulation, and physics-driven interactions. In *Crunch Dunk VR* (Doritos collaboration), I engineered gesture-recognition-driven physics interactions with real-time feedback loops.

- **Rapid Prototyping & Iteration:** My workflow is built around autonomous feature design: conceive → code prototype → playtest → iterate. I have shipped weekly builds for community playtests across multiple VR titles, incorporating direct player feedback into core mechanics.
- **Portfolio of Shipped Work:** portfolio-web-pi-inky.vercel.app — 23+ playable projects with video demonstrations, including VR, 2D, 3D, and multiplayer experiences.

I am deeply aligned with thatgamecompany's philosophy of creating meaningful, enriching experiences that touch and inspire players. I would be honored to bring my technical design expertise, prototyping velocity, and passion for player-centric craft to your team.

Thank you for your time and consideration.

Sincerely,
Anniket
