Dear Voodoo Hiring Team,

I am writing to express my strong interest in the **Senior Game Developer (Game Feel, UI, Animations, VFX)** role for Paper.io 2. As a developer who has shipped **50+ Unity applications** including **7 polished 2D casual titles** with millions of combined downloads, I have spent years obsessing over the exact disciplines this role demands: razor-sharp game feel, buttery-smooth UI/UX, juicy animation systems, and impactful VFX — all optimized for mobile performance at scale.

Paper.io 2's success is built on deceptively simple mechanics elevated by exceptional game feel — the responsiveness of territory capture, the satisfaction of trail rendering, the clarity of UI feedback, and the visual punch of eliminations. These are the details I live for.

Here is how my hands-on experience maps directly to your requirements:

- **Game Feel & Core Mechanics Polish: I have designed and implemented core gameplay loops for 7 shipped 2D casual games (Hill Climb replica, Flappy Bird clone, Brick Breaker, Stackmaster 3D variants, and original prototypes). In each, I obsessively tuned input responsiveness, physics parameters, camera shake, hit pause, screenshake, and "juice" factors to achieve that elusive "feels right" quality.**
- **UI/UX Systems for Mobile: Built complete UI frameworks including animated menus, HUDs, progression meters, reward sequences, and onboarding flows — all optimized for safe areas, aspect ratios, and touch input. Former graphic design team lead (Whiteboard) with strong visual communication background ensuring UI clarity and brand consistency.**
- **Animation Systems & VFX: Implemented complex animation state machines, procedural animation (IK, physics-driven), particle systems, shader-based VFX, and trail renderers. In *Crunch Dunk VR* (Doritos collaboration), I built satisfying ball trajectory arcs, rim collision effects, and score pop VFX. In 2D titles, I crafted elimination explosions, combo cascades, and UI transition animations.**
- **Mobile Performance Optimization: Deep expertise in Unity Profiler, draw call batching, GPU instancing, texture atlasing, object pooling, and GC allocation minimization — critical for maintaining 60 FPS on low-end Android devices at Voodoo's scale.**
- **Live Operations & A/B Testing Mindset: Integrated Google Ads/Unity Ads monetization (rewarded video, interstitial, banner), Firebase Remote Config for live tuning, and analytics event pipelines. Understand the metrics-driven iteration cycle that drives retention in hyper-casual/casual titles.**

- **Unity Expertise (C#, URP/HDRP, DOTS/ECS awareness): Expert-level C# architecture, custom render pipelines, shader graph, and modern Unity packages. Can rapidly prototype, profile, and ship features within tight sprint cycles.**

I have studied Voodoo's approach to scaling simple concepts into global hits through relentless iteration on game feel and visual clarity. I would be thrilled to bring my "game feel first" mindset, mobile optimization expertise, and shipped casual game portfolio to the Paper.io 2 team.

Thank you for your time and consideration.

Sincerely,
**Anniket**
