Hiring Team — Gameplay Engineering & Technology
teamLFG (PlayStation Studios)

APPLICATION: Staff Gameplay Engineer – Systems and Performance (Job ID: 6211044004)

Dear Hiring Team at teamLFG & PlayStation Studios,

I am writing to express my enthusiastic interest in the **Staff Gameplay Engineer – Systems and Performance** role at teamLFG. Having engineered and shipped over 50 real-time interactive game titles—including 35+ demanding spatial and physics-driven titles running at a strictly locked 90+ FPS on standalone XR hardware—I specialize in low-level systems architecture, high-efficiency gameplay frameworks, and rigorous multi-platform performance optimization.

teamLFG's mission to craft a vibrant, community-bonding multiplayer franchise under PlayStation Studios with rich character feel and whimsical gameplay resonates deeply with my engineering ethos. Building systems that empower content designers while maintaining razor-sharp frame-time budgets is where I thrive:

- **Foundational Systems & Modular Architecture:** Architected decoupled, data-driven gameplay frameworks and custom developer tooling across dozens of projects. Designed extensible interaction layers, deterministic physics wrappers, and clean interface boundaries enabling rapid prototyping without incurring architectural debt.
- **Proactive Profiling & Performance Budgets:** Proven track record eliminating systemic CPU, GPU, memory, and networking bottlenecks. Deep expertise in frame-timing analysis, draw-call batching, memory footprint caching, and zero-allocation runtime loops to guarantee stutter-free performance under heavy gameplay simulations.
- **Multiplayer Networking & Simulation Scaling:** Extensive experience implementing real-time network pipelines (WebSockets, TCP/UDP sockets, Photon/custom transports), handling client-side prediction, entity interpolation, and bandwidth-efficient state synchronization to deliver seamless collaborative player experiences.
- **Collaborative Technical Leadership:** Committed to establishing performance metrics, budget dashboards, and profiling workflows that demystify runtime costs for cross-functional teams, fostering a studio culture where engineers, designers, and artists deliver high-fidelity gameplay in harmony.

I welcome the opportunity to bring my deep technical discipline, passion for responsive character-driven gameplay, and performance engineering rigor to teamLFG and PlayStation Studios. Thank you for your time and consideration.

Sincerely,

Anniket Prajapati

Gameplay Engineer | Real-Time Systems & Performance Specialist
